

Defect Reports: OrangeHRM Demo Automation

Document ID: DR-OHRM-001 Version: 1.0 Author: ABHISHEK K M Date: 2026-07-20

Defect log convention: per Test Plan §3 — GitHub Issues, labelled aut-bug, severity Critical/High/Medium/Low, priority P1–P4. Script defects (test-bug) are tracked separately and listed in the closure report.

DEF-OHRM-001 — Intermittent HTTP 500 on the login page CRITICAL

TITLE	/web/index.php/auth/login intermittently returns HTTP 500, blocking all access
MODULE	Login (platform-wide impact)
STEPS TO REPRODUCE	Perform several successive login/logout cycles (observed during automated regression, ~10–20 requests over a few minutes); navigate to the login URL; intermittently the server responds 500 instead of the login form
EXPECTED RESULT	Login page returns HTTP 200 and renders the credential form on every request
ACTUAL RESULT	Sporadic 500 Internal Server Error; the page recovers on retry after a few seconds
PRIORITY	P2
ENVIRONMENT	OrangeHRM Open Source demo, observed 2026-07-20 during Cypress 15.18.1 headless regression (Electron 136), Windows 11; reproducible independent of browser
EVIDENCE	Screenshot: cypress-run-500-login.png · CI log: "cy.visit() failed ... 500: Internal Server Error" (full-suite run #2, 2026-07-20)
REPRODUCIBILITY	Intermittent (~1 in 10–15 page loads under repeated authentication activity)
STATUS	Open — reported; suspected infrastructure/rate-limit behaviour on the shared tenant, needs server-side log correlation

DEF-OHRM-002 — Unhandled JavaScript exception during logout navigation

LOW

TITLE	Unhandled TypeError: Cannot read properties of undefined (reading 'response') thrown when navigation cancels in-flight dashboard requests
MODULE	Dashboard / global SPA error handling
STEPS TO REPRODUCE	Log in as Admin; land on Dashboard (widget XHRs begin loading); immediately open the user menu and click Logout; observe the browser console
EXPECTED RESULT	Cancelled/401'd XHRs during navigation are handled gracefully; no uncaught exceptions reach the console
ACTUAL RESULT	Dashboard widget calls (api/v2/buzz/feed, api/v2/dashboard/shortcuts) return 401 mid-teardown and the response interceptor throws an uncaught TypeError; thrown twice per occurrence
PRIORITY	P3
ENVIRONMENT	Same as DEF-OHRM-001; observed consistently on logout in Chromium-family browsers
EVIDENCE	Screenshot: logout-uncaught-typeerror.png (captured by Cypress on TC-LOG-008, run #1, 2026-07-20)
REPRODUCIBILITY	Consistent when logout occurs while dashboard XHRs are in flight
STATUS	Open

DEF-OHRM-003 — Leave Apply accepts an invalid date range when typed manually

HIGH

TITLE	"To" date earlier than "From" date is accepted on Apply Leave when entered via keyboard; validation fires only for calendar-widget selection
MODULE	Leave > Apply
STEPS TO REPRODUCE	Log in as Admin (entitlement present); Leave > Apply; select leave type; type From Date 2026-08-10 and To Date 2026-08-08 directly (no calendar popup); click Apply
EXPECTED RESULT	Validation error ("To date should be after from date"), submission blocked — as correctly happens when dates are picked from the calendar widget
ACTUAL RESULT	The form submits; a leave request with an inverted date range is created and appears in My Leave with a negative/zero duration
PRIORITY	P2
ENVIRONMENT	OrangeHRM demo, Chrome 138 / Firefox 128, verified in exploratory follow-up after automated TC-LEA-004 failed on this path
EVIDENCE	Screenshots: leave-inverted-range-accepted.png, my-leave-negative-duration-row.png · failing case: TC-LEA-004 (both frameworks)
REPRODUCIBILITY	Consistent via keyboard entry; not reproducible via calendar picker
STATUS	Open

DEF-OHRM-004 — Employee name header shows stale value after edit

MEDIUM

TITLE	After editing an employee's last name in Personal Details, the page header keeps showing the old name until a manual reload
MODULE	PIM > Employee Personal Details
STEPS TO REPRODUCE	Log in as Admin; PIM > open any employee; in Personal Details change Last Name and Save; observe the "Successfully Updated" toast; compare header name to saved value
EXPECTED RESULT	The header reflects the new name immediately after the save is confirmed
ACTUAL RESULT	Header continues to show the previous name; grid and header show the new value only after a full page reload
PRIORITY	P3
ENVIRONMENT	OrangeHRM demo, found during exploratory testing around TC-PIM-007 (which asserts persistence via reload and therefore passes)
EVIDENCE	Screenshot: pim-stale-header-after-save.png · screen recording: pim-header-refresh.mp4
REPRODUCIBILITY	Consistent
STATUS	Open — not covered by a scripted case; RTM gap logged in the closure report with a proposed TC-PIM-013
